SET THE TABLE
FOR SAFETY

Cooking equipment fires are more common than you think - causing nearly half of all home fires. According to the National Fire Protection Association (NFPA), an average of 46% of home fires result from cooking equipment each year.

DIRECTIONS

- Smoke alarms should be installed in every bedroom, outside each sleeping area, and on every level of the home. For the best results, smoke alarms should be all interconnected so they all sound at once.
- Inspect all small appliances and electric cords to make sure they are in good repair before using them. Do not use appliances with cracked or frayed cords.
- Never plug more than one high-wattage appliance into a single outlet.
- Keep appliance cords away from hot surfaces like the range or toaster.
- Make sure outlets near sinks are equipped with ground fault circuit interrupters (GFCIs) to prevent shocks, and test them regularly.

Celebrate Public Power Week!
October 4-10, 2020

What does “Public Power” mean? It means low rates, high reliability, customer responsiveness, community focus, and local control.

Stop by our office October 5-9, 2020 to pick up your free gift in celebration of your Public Power provider, the Grand Haven Board of Light & Power.

Your Board of Directors:
Jack Smant, Chairperson
Gerald Witherell, Vice Chairperson
Todd Crum, Director
Larry Kieft, Director
John Naser, Director

Grand Haven Board of Light & Power
1700 Eaton Drive, Grand Haven, MI 49417

At its December 2019 meeting, the Board of Light and Power awarded the demolition of the J.B. Sims Generating Station to Bierlein Companies, Inc. Demolition activities began in June 2020 with estimated completion by Fall 2021.

Demolition of the J.B. Sims Generating Station is progressing as planned. The project began with asbestos removal from all areas within the plant. The Unit III turbine, coal crusher houses for all three units, and the electrostatic precipitator (pictured below), which spanned between the boiler and the Flue Gas Desulfurization Unit (often referred to as the scrubber), have now been removed. Bierlein is in the process of removing the coal conveyors that lead up to the larger buildings and one of the Unit III ash impoundments is closed and remediated.

The BLP is continuing its evaluation and analysis of facilities and equipment for the Sims site after demolition and site remediation activities are completed. The Sims site is also being evaluated and retained by the BLP as a future site for a small “community solar” project and a location to potentially install utility-scale batteries or other future energy storage or smaller distributed energy resource needs of the utility. A final Master Plan report is expected to be presented to the Board in September 2020 by Progressive A.E.

The BLP’s mission is to meet our community’s expectations for quality local electrical utility service that returns value to our customers and the community as a whole. Our current transition will allow us to continue with that mission, improving reliability in the process, and offering a path forward that maintains stable rates and the high-quality electric utility service the community is accustomed to.

Many household appliances are using energy even when not in use, including televisions, computers, cable boxes with DVR, cell phone chargers, printers, and game consoles. Depending on how many appliances are used, costs can quickly add up to $100-200 a year.

Stop energy vampires. Plug electronics into a smart power strip or a power strip you can turn off. Simply unplugging unused kitchen appliances could save you $10-20 a year.

Learn how to stop energy vampires, visit SafeElectricity.org.
